

## Application Support System Engineer Linux/Windows Senior P24-462

Start: 21/10/24  
Location: 2d Brussels, 3d remote - occasional travel to Berlin (travel expenses paid)  
Duration: Long term (+12 months)  
Customer: Elia Group

---

### Description:

We are looking for someone eager to learn, and able to learn quickly. The main tasks will be the following:

- **Assist on server architecture for deployment of new applications and middleware: analyze requirements, design new (or changes to) architecture, test and PoC, create implementation project and work with team lead in deploying it;**
- Challenge requirements versus security and manageability reasons;
- Interface with (mainly IT) clients concerning area of expertise;
- Third-line troubleshooting of complex issues.
- Assist on day to day operational tasks like deploy and update all in-house developed applications in acceptance & production environments (mostly Windows IIS & SQL based);
- Configuration of F5 load balancing VIPs for web applications
- System administration of the supporting core applications: RabbitMQ, Redis Cache and other shared technologies – knowledge of these products is a nice to have;
- Enforcement and monitoring of security guidelines and standards;
- Monitoring, change and patch management of the environment;
- Ensure optimal 2nd/3rd level (interface to Microsoft and other 3rd parties) support;
- Keep operating and installation documentation for the above areas up to date;
- **Be part of the duty role (24/7, 1 in 6 weeks) in this team.**

### Requirements:

- **Proven experience in supporting Applications on Linux Redhat (deploy an application, verify logs, monitor health and performance of a system, create scripts)**
- **Proven recent expert experience with Windows Server (2012-2019) (>10 years);**
- Proven knowledge of IIS management and web site deployment
- Broad IT knowledge covering networking, security, end user, ITIL concepts.
- Knowledge of Powershell

- Nice to have: Knowledge of MS-SQL, MongoDB, RabbitMQ, NEO4J or Redis Cache is a plus (on the job coaching/training as operator will be provided in missing knowledge);
- Understanding of firewalls and network load balancing concepts (product knowledge will be provided)

### **Non-technical Skills**

- Team player, but able to work independently;
- Strong planning and organizational skills;
- Analytical skills for both architectural and troubleshooting work;
- Pragmatic mindset and customer minded;
- Presentation skills, Visio drawing skills;
- Must be able and eager to learn new products or technologies (if not all of the above technologies are known, it is expected to learn them within a year maximum);
- Must be natively French or Dutch speaking, able to speak and understand the other language – **English mandatory** for documents and international meetings, German is a plus;

### **What makes this mission attractive?**

- An interesting project at the reference within the energy sector: **Elia encourages innovation and collaboration**. Within our company you will be at the forefront of the energy transition, and you will have the chance to contribute to ground-breaking technologies designed to accelerate this transition. It is a one-of-a-kind opportunity to demonstrate your skills and develop further your competences within this project.
- **A diverse team of co-workers**: Elia puts a high value on diversity and inclusion. You will join a diverse and passionate team that enjoys sharing knowledge and leading the way towards a more sustainable future together.
